

New technologies – 3D printing

Launch of the website sculpteo.com : 3D printing, and the designs turn into reality

Paris, FRANCE (January, 19th 2010) : 3D printing dedicated to imagination.

An Internet user has created a unique 3D model and wishes to make it real or share it? Sculpteo allows him to build his creative ideas, by transforming his designs into concrete objects, or to share them with the Sculpteo community.

Decorative objects, static or jumping figurines, miniatures, prototypes, mechanics, robots, models... everything is possible with 3D printing !

3D printing in a few clicks

The Internet users design their models with their usual 3D software. To order their making, they just have to upload them on sculpteo.com, in one of the numerous accepted formats : obj, 3ds, lwo, stl, skp... They will receive their objects directly in their home.

To order or share the creations...

To concretise a personal project, or to offer a unique gift to a close : the Internet users can order their creations very easily on sculpteo.com. They choose the material, coloured or monochrome printing, the size of the object, and the price is automatically estimated.

The payment is made online and is totally secured by special partners.

The designs belong to them and other users can't see them in the gallery or use them.

To share the creations with the Sculpteo community : the 3D designs are visible in the gallery and can be ordered by other Internet users, if it is the choice of the designer.

...in France as well as in Europe !

The website is available in French and in English. The delivery of the objects is guaranteed in Europe, within 15 days, directly to the place chosen by the Internet user.

Free test of the 3D printing services

The Internet users have the possibility to make a free test of the Sculpteo 3D printing services, by ordering their customised key ring, created from any design available in the gallery.

Only delivery costs will be taken in charge by the client.
