## Rolled, folded or 3D?

Sculpteo.com is an online 3D printing service which is being used by architects to print 3D models and prototypes of their designs. The sophisticated printing machines allow you to print curved shapes and complete structures by using a layering sintering technique. The architect Jean-Baptiste Pontecorvo created this model of a villa with a curved roof which, according to Sculpteo.com, would not have been able to be made using other techniques.
