

Environmental Policy

As an industrial player, we are responsible for minimizing the environmental impact of our production sites and products.

Sculpteo is committed to adopting an environmental management system (EMS) defined in the ISO 14050 standard. This EMS demonstrates Sculpteo's desire to go beyond compliance with European regulatory requirements and enshrines sustainable development at the heart of our business strategy.

In effect, we are committed to the following:

1. Reduce waste related to the 3D printing process,
2. Consolidate the recycling of raw printing materials and offer a recycling channel for obsolete parts for our customers,
3. Improve our use of water resources in the post-treatment stages,
4. Switch to green energy consumption at our production sites,
5. Develop our offers towards more sustainable solutions by offering recycled materials or materials from renewable sources,
6. Make accessible the reporting of our performance which serves as the basis for all our decisions,
7. Offer tools for measuring the environmental impact of our products on our customers,
8. Encourage the adoption of soft mobility and digital and energy sobriety in our premises in Villejuif (France) and our American branch.
9. Make our employees aware of the EMS and give them the means to participate in its improvement,

Implementing this system will make Sculpteo's actions part of a continuous improvement process. This policy will evolve as we achieve our objectives and define new indicators. Our commitment to the environment extends to our employees, our customers, and our community of partners.

Alexandre d'Orsetti, CEO
